

Dear Colleagues and Friends,

The main aim of the ISRD symposium is to bring together communities involved in research, development and applications dealing with reactor dosimetry measurements.

The ISRD symposium is held approximately every three years to provide a forum for the interchange of state-of-the-art techniques, data bases and standardization of radiation metrology.

The European Working Group on Reactor Dosimetry (EWGRD) and the Committee E10 on Nuclear Technology and Applications of the American Society for Testing and Materials (ASTM) have jointly organized this 15th ISRD meeting. The local organization and support have been provided by the French Atomic Energy and Alternative Energies commission (CEA) through its research center Cadarache (CEA/DEN/CAD).

The 15th ISRD was a real success thanks to your contributions and to your participation and also thanks to the ISRD committees, reviewers, partners and sponsors. More than 100 presentations and posters have been presented and discussed. These are almost all presented in the present conference record. Over 130 participants have finally attended the conference.

The workshop initiatives were also successful.

Finally I would like to thank all attendees for having made this scientific event a success.

Abdallah LYOUSSI
Chairman of the Organizing Committee
