Figure 1 on page 2 should be replaced by the following, corrected version. The caption remains unchanged.

Figure 1. a) Compiled experimental ER cross sections of fusion-evaporation reactions with $^{208}$Pb and $^{238}$U targets, and $^{48}$Ca projectiles [28-32]. Only maximum values of $\sigma_{1n}$ and $\sigma_{3n}$ are shown for $^{208}$Pb and $^{238}$U, respectively. Maximum values of either $\sigma_{3n}$ or $\sigma_{4n}$ from $^{48}$Ca-induced reactions with deformed Gd-Cf targets are shown. Arrows mark upper limits. Dashed lines are drawn to guide an exponential descent. b) Theoretical $B(r)$ $S_n$ calculated within the macro-microscopic FRDM approach are given [3,37].
