PREFACE

The fourth edition of the International Workshop on “Flavour changing and conserving processes” 2022 (FCCP2022) took place on Sep 22-24, 2022 in Anacapri, Capri Island, Italy. The Workshop was organized by the Physics Department of the University of Naples “Federico II” and by INFN (Istituto Nazionale di Fisica Nucleare) – Sezione di Napoli. The involved scientific community has been that of experiments like muon g−2, Mu2e, MEG, Mu3e, COMET, but also that of the K and B meson physics. More than thirty talks were presented covering the theory status as well as the latest results of experiments in various Laboratories of the world. Major attention was drawn on the muon g-2 first result from Fermilab. We wish to thank everybody who contributed to the success of the Workshop.

We look forward to the next edition waiting for new results from many sides, especially on the muon g-2 front.
